WHAT WE HEARD FROM YOU

# A cancelled spot shouldn't turn into a game of phone tag

1. You or Carla notice the cancellation in Square.
2. You check the Google Sheet for someone who might fit.
3. You text them from the salon phone and wait for a reply.
4. If they say no, or don't answer, you start again.

> “Sometimes we lose track of who was contacted, and the opening stays empty.”

**8 to 12**

tricky cancellations a week, most with under 48 hours' notice

**20 to 30**

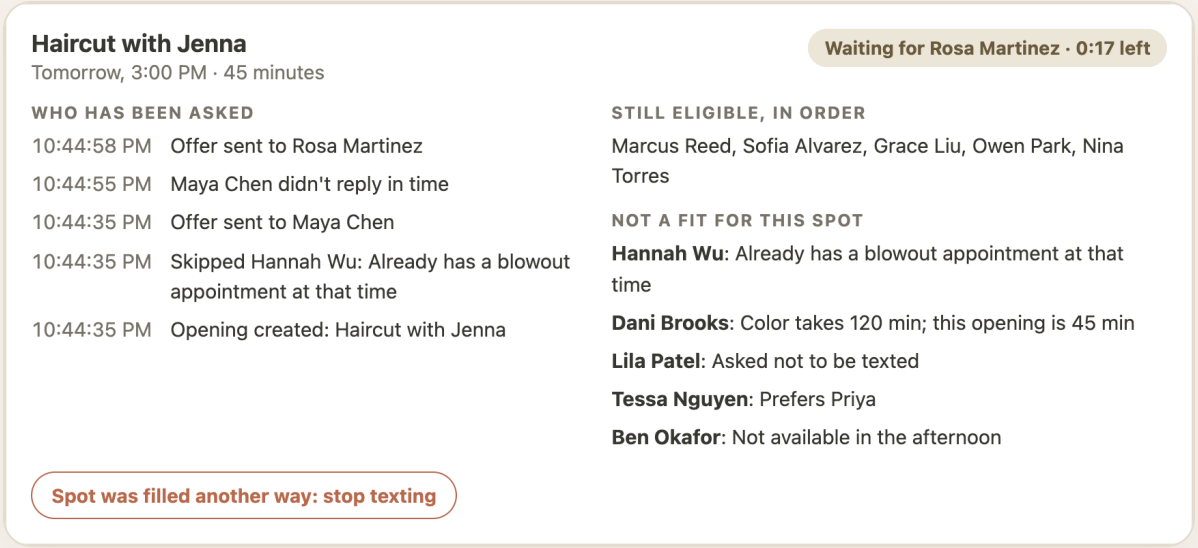

people on your waitlist at any time

**What would success look like?** Fewer empty gaps, and less time spent chasing people.

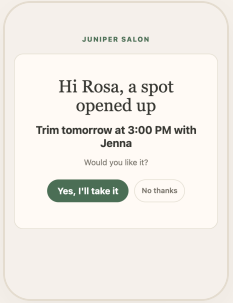

WHAT THE PROTOTYPE DOES

# You tell it a spot opened up. It does the chasing.

1. You enter the cancelled spot: service, stylist, time.
2. It texts the first person who fits, **one at a time**, earliest on the waitlist first. No need to approve each text.
3. They tap a link and choose **yes or no**. No account, easy on a phone.
4. The **first yes gets the spot**. Everyone else is told it's gone.
5. You see the whole story on one screen.

Your screen: who has the offer and how long is left, who was asked, who is next in line, and why someone was skipped.

What a client sees when she taps the link in her text.

WHAT WE BUILT FOR THE MESSY MOMENTS

# It handles the things that go wrong, the way you described

### Two people say yes

Only one gets the spot. The other is told right away it's gone.

### Nobody replies

After about 15 minutes for same-day spots, it tells them it's gone and moves on.

### A text doesn't go through

It tries again, then moves to the next person. You can see what happened.

### Filled another way

One button stops everything. Anyone waiting on an offer is told.

### Someone backs out

The spot reopens and goes to the next person in line.

### It stops working

A banner tells you within seconds, so you know to go back to the sheet and phone.

Always: no one is asked twice for the same spot, no one who asked not to be texted is contacted, and nobody with a clashing appointment is offered the spot.

BEING CLEAR ABOUT WHAT'S REAL

# The process is real. The tool connections are stand-ins.

## Working now real

- The step-by-step process and all the rules above
- Waiting for replies, even if the system restarts
- Your staff screen and the client's link page

## Stand-ins simulated

- Square: the calendar, clash check, and booking
- Your Google Sheet waitlist
- Texts from your salon phone

## Not built yet later

- Adding people to the waitlist on this screen
- Quiet hours for texting
- Staff sign-in and extra-secure links

## Guesses we made. Please tell us if any are wrong:

- If a client names a stylist, only that stylist counts.
- For spots on later days, clients get 2 hours to reply.
- No new offers in the last 30 minutes before an appointment.
- Availability means morning, afternoon, or evening.

A PRACTICAL NEXT STEP

# Two weeks on your real cancellations, with you in control

## What we'd do

1. **Week 1:** connect to Square and your waitlist sheet, and count how many cancelled spots get filled today, and how fast.
2. **Week 1:** run it quietly alongside you: it shows who it would text, and you keep texting by hand.
3. **Week 2:** turn on automatic texts from your salon number for same-day spots, and compare.

## What we need from you

- Check the four guesses on the last slide
- A quiet-hours rule, if you want one
- Which phone number texts should come from

## How we'll know it's working

Fewer empty gaps, and less time spent chasing people. You don't have a dollar figure yet, so we'll start by counting empty spots and staff time.
